## Executive Summary

Following the debates, Gravis Marketing, a non-partisan research firm conducted a survey of 1,438 likely voters in Colorado on October 3<sup>rd</sup> – October 4<sup>th</sup> regarding their likely vote for a given presidential candidate. Of the 1,438 that began the survey, 1,285 gave a response regarding their preference for president. The poll carries a margin of error of 2.8%.

Romney’s lead is a reversal from the September 25<sup>th</sup> poll, where Obama was ahead 50.2% to

45.5%. What happened? In terms of the numbers, Obama saw a decrease of 4.4% among “Very likely Obama” voters, an increase of 1.2% among “Likely Obama” voters, and a 1.1% decrease in “Somewhat likely voters”. On the other side, Romney saw a 0.2% decline in “Very likely Romney voters,” a 1.3% increase among “Somewhat likely Romney” voters and a 2.7% increase among “Likely Romney” voters. Overall, it looks as if the debate shifted voters more away from the “very likely” category towards center. Interestingly, the percentage of “Undecided” went from 4.3% to 4.8%. A full reporting of the results and cross tabulations follows.
